Key Findings from User Testing of user.miahbd.com

This section summarizes the practical observations identified while interacting with the website as a user, highlighting both strengths and weaknesses.

Positive Findings

1. Faster Loading Speed

- The website loads significantly faster compared to the previous platform.
- Lightweight design ensures smooth performance even on slower internet connections.

Impact:
Improves user experience, reduces bounce rate, and is highly suitable for mobile users in Bangladesh.

2. Quick Sign-In Options (Social Login)

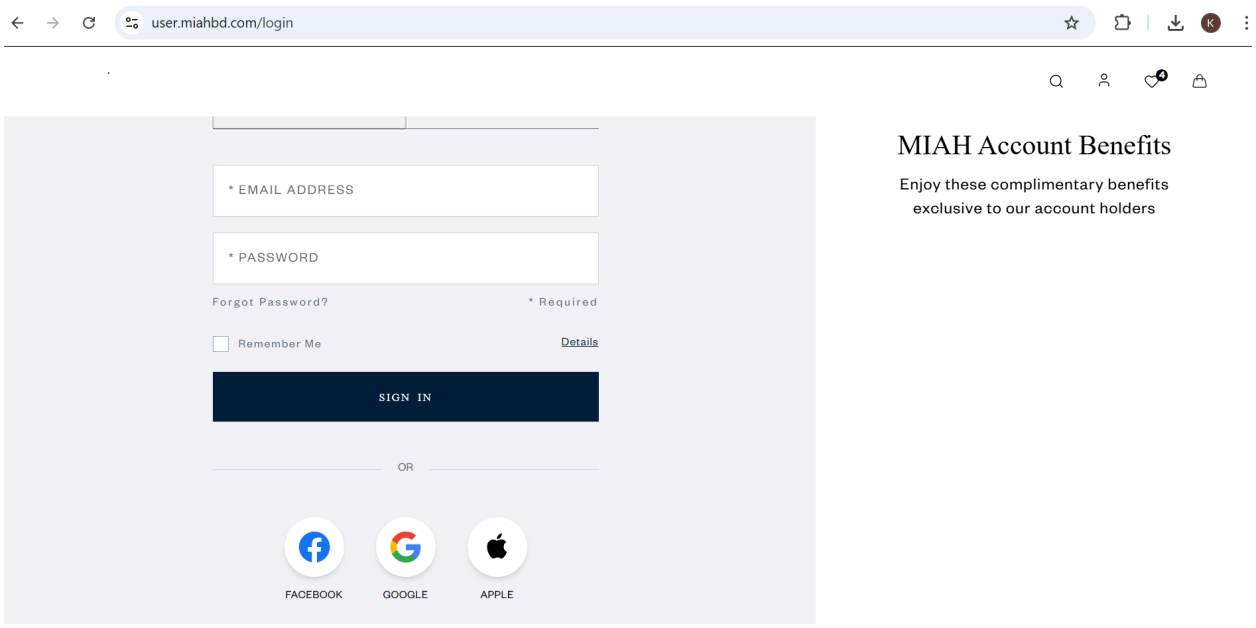

Figure 1: Social Sign-In Options (Google, Facebook, Apple)

- The platform provides fast sign-in options using:
    - Google
    - Facebook

    - Apple
- This reduces the time and effort required for account creation and login.

Impact:
Enhances user convenience and increases the likelihood of user registration and retention.

Minor Issue:

- No clear label such as “Or sign in with” is shown, which may confuse some users.

Negative Findings

1. No Phone Number Validation

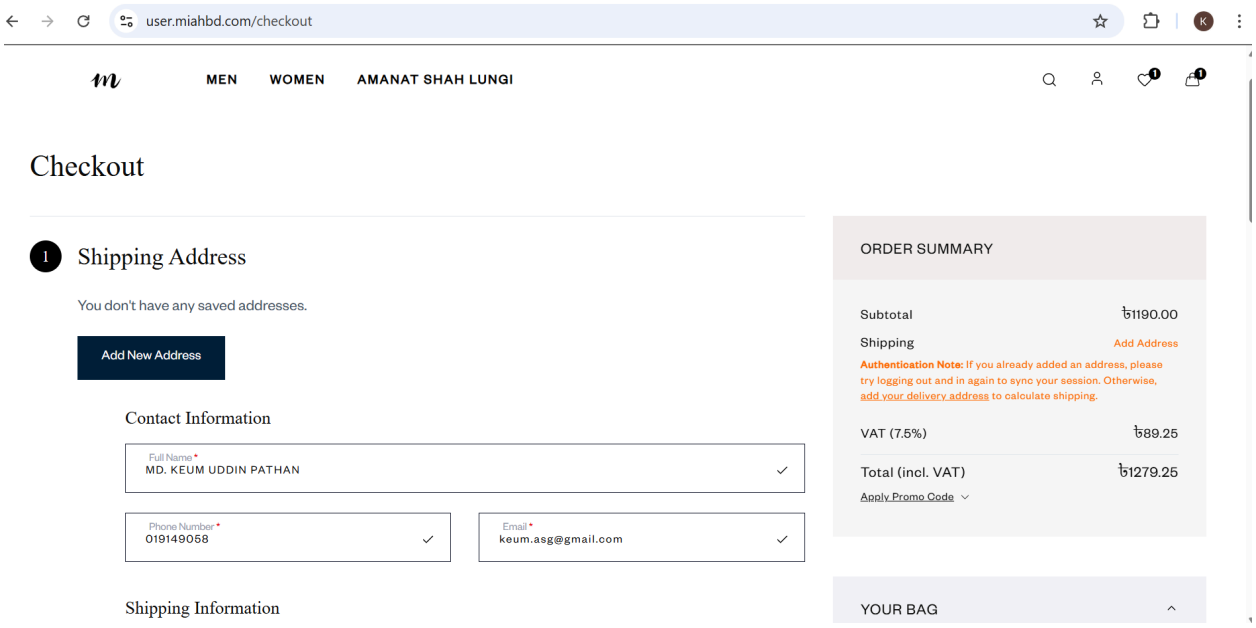

Figure 2: Phone Number Input Field Issue

- The system does not validate incorrect phone numbers.
- For Bangladeshi users, phone numbers should be **11 digits**, but the system accepts invalid entries.

Impact:

- High risk of incorrect orders
- Delivery failures
- Reduced operational efficiency

2. Duplicate Text in Area Type Field

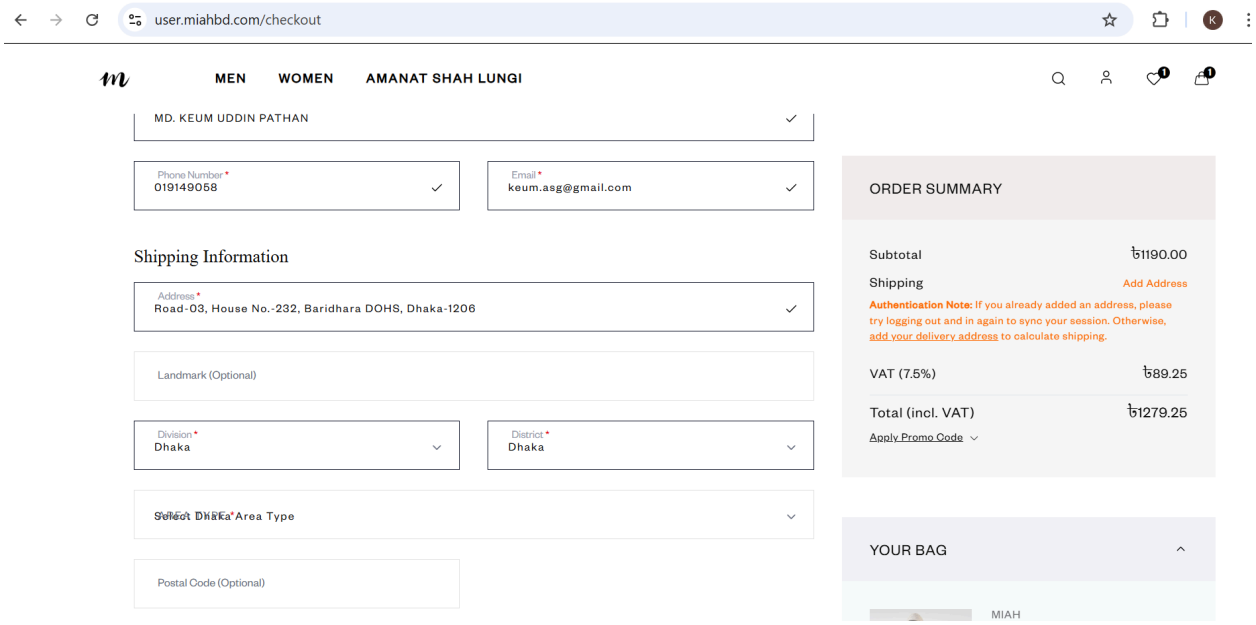

Figure 3: Area Type Field UI Issue

- The “Area Type” field displays **duplicate/repeated text**, creating confusion.

Impact:

- Reduces clarity
- Makes the form appear unpolished
- Can lead to incorrect user input

3. Checkout Allows Invalid Information Submission

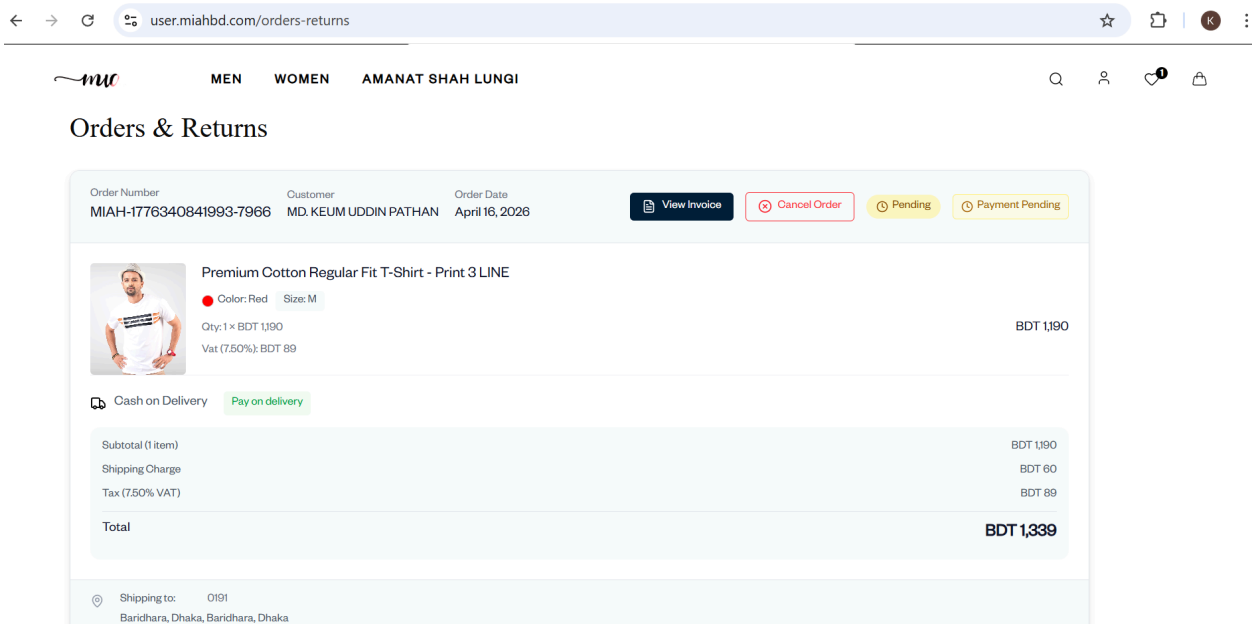

Figure 4: Checkout Completion with Invalid Data

- Users are able to complete checkout even with:
    - Incorrect phone numbers
    - Invalid or incomplete address

Impact:

- Orders may be misdirected or fail
- Risk of misuse or fake orders
- Direct negative impact on business operations and customer trust

Observation

The checkout system lacks proper input validation, allowing users to place orders with incorrect information. This is a high-risk issue that can directly affect order accuracy, delivery success, and overall business performance.
